

Uwe Richard Kackstaetter, Ph.D.

Full Professor of Geology

Specializing in Applied Geology & Mineralogy

Campus Box 22 • P.O. Box 173362 • Denver, CO 80217-3362

Cell: 720-257-4486 • E-mail: kackstae@msudenver.edu

SPECIAL OFFER

FREE MINERAL SPECIMEN IDENTIFICATION

Participants will aid in the education of future Geoscientists!

The Department of Earth & Atmospheric Sciences Mineral Laboratory at the Metropolitan State University of Denver offers **FREE** non-destructive & destructive mineral identification services as part of their geoscientist training program and university community outreach. Samples will be assigned to students in Mineralogy & Optical Mineralogy during the **Fall semester ONLY** and analyzed under supervision by the instructing professor according to the clients specification. Clients will be presented with a full analytical report by the end of the semester and non-destructive tested specimens will be returned upon request (Please provide SASE or pick-up at the Earth Science laboratories at MSU Denver).

FREE SERVICES

NON DESTRUCTIVE TESTS

- ☐ **Basic Mineral Identification:** Mineral will be laboratory tested for hardness¹, density, streak, magnetic & UV-response, radiation, possible optical properties & crystal habits and other as applicable and complete report compiled. *Note: While many minerals can be closely approximated with this test, some may NOT unambiguously distinguished without further testing. Destructive testing on a small sample chip is recommended for clarification. Call for details.*
- ☐ **Nondestructive XRF** (X-ray fluorescence) semi quantitative chemical analysis. For heavier elements ("Fe" and up). Usually run automatically with the basic mineral identification request.

DESTRUCTIVE TESTS

- ☐ **Basic Optical Analysis:** GRAIN MOUNT: A small sample fraction of finely powdered sample fragments will be used for optical grain mount analysis. REFRACTOMETER: Non-Destructive if sample has flat crystal faces. Both tests are specific for optical mineral properties and works for non-metallic minerals.
- ☐ **X-ray diffraction (XRD) analysis** Most precise test for unambiguous mineral identification. Usually used for professional, industrial & research applications. Mineral will be powdered to a few microns and subjected to an x-ray beam. Resulting x-ray dispersive pattern is indicative of a specific mineral (almost like a fingerprint). Computerized database with over 3,700 minerals will be searched for closest match and the mineral will thus be exactly identified.
- ☐ **ICP/AA wet chemical analysis and/or Additional Wet Chromatographic Analysis:** A small sample will be completely destroyed and digested in hot Aqua Regia acid. The solution will then be scanned for a suite of 40+ chemical elements with our ICP-MS. AAS is element specific investigation.

To submit samples or for further information contact Dr. Kackstaetter as indicated above.
All samples for identification should be received by first week in September.

While not required, a suggested \$60 or more tax-deductible donation to MSU Denver EAS Foundation for consumables & equipment maintenance would be highly appreciated.

¹Hardness testing may be slightly damaging to the specimen. While the test will be performed in an inconspicuous part of the sample, scratching may occur. It is best to include an inferior secondary sample of the same material for analysis.

MINERAL IDENTIFICATION REQUEST FORM

(Please attach to specimen! Use additional forms for each submitted specimen)

CLIENT INFORMATION (Please Print Clearly or Type Directly into this PDF document):

Last Name:	First Name, MI:	Date:
Address:	City:	State, ZIP
Phone:	Email:	

MINERAL SAMPLE INFORMATION & ANALYTICAL REQUEST (Please Print Clearly):

Short Mineral Description (what does the mineral look like you want identified; especially important for minerals in rock matrix):		
Where found (approx. location o.k.):		
Requested Laboratory Tests (Check all that apply) <i>Suggestion: For destructive sample testing, please submit additional secondary sample chips of same material</i> BASIC MINERAL IDENTIFICATION incl. XRF - NON DESTRUCTIVE ADD'L WET CHEMICAL QUALITATIVE ANALYSIS (ICP-MS / AAS / Chromatographic) - DESTRUCTIVE OPTICAL TESTS: <input type="checkbox"/> Grain Mount - DESTRUCTIVE; <input type="checkbox"/> Refractometer -limited to suitable samples (NON DESTR.) X-RAY DIFFRACTION ANALYSIS - DESTRUCTIVE		
Comments: Please Return Sample: SASE included or Will pick up. Discard sample after analysis: Just mail report or Will pick up report	Voluntary Suggested Donation: \$60 \$30 \$15 \$8 (Make Checks payable to MSU Denver Earth Science Foundation)	

By submitting the mineral sample for analysis I agree to following terms and condition: Neither Metropolitan State University of Denver, the Department of Earth & Atmospheric Science nor its affiliates, professors and students shall be liable for any loss or damage to submitted mineral samples nor for any damages, including but not limited to injuries, loss of property or profits, or incidental, consequential, exemplary, special or other damages written or implied, including any damages resulting from use of reported analytical results.

Do NOT write here! For internal use only:
